

Introduction / Architecture / Installation

Monday, December 16, 2024 11:27 AM

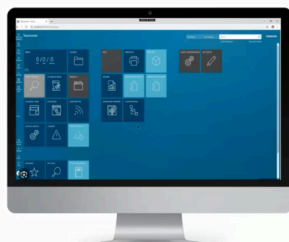

Introduction

What is Web Application?

- Run or accessible on any operating system as per browser compatibility
- No installation
- Reduced cost
- Flexibility to access from anywhere geographically

What is Active Workspace?

Active Workspace is a new architecture and User Interface of Teamcenter.

Key Features

- ✓ User Friendly
- ✓ Low Maintenance
- ✓ Configurable and Extensible

Why Active Workspace (1/2)

Targeted for all levels of user sophistication

- In context actions
- Role based
- Task / workflow focused

Training/Support

- Reduced training time for new users
- Reduced help desk tickets
- Leverage AI to mentor new users

Configurable

- Easily tailored for an industry, customer, group/role, project/program and process
- UI Builder and Workspaces

Why Active Workspace (2/2)

Capabilities

- Leverage capabilities unique to Active Workspace

Cost

- Zero-install client
- Maximize existing investments by providing Teamcenter access to more people across the organization

Components used for Teamcenter interoperability

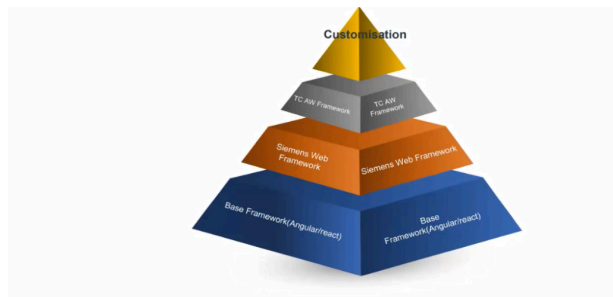

- MCAD and ECAD
- Microsoft Office
- Teamcenter RAC

What can I do in Active Workspace that I can't do in RAC...?

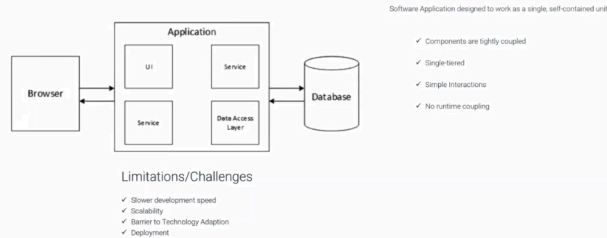

- Role based UX
- Faster Filtering – Filter after viewing data as a group
- Editing on the fly – Easy toggle between edit and read only
- Fully configurable Client(Declarative)
- Integrated Tooling for configuration and customization
- Offline Online Integration
- AI based Teamcenter Assistant

Architecture

Siemens Framework

Monolithic Architecture

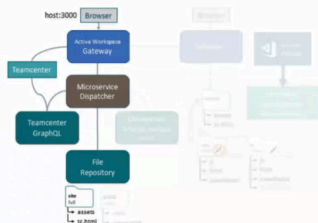

Microservices Architecture

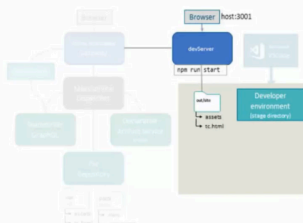

Production Build

- Connects to the gateway service with port 3000
- Gateway retrieves the Active Workspace site from the file repository
- No local changes displayed

Development Server

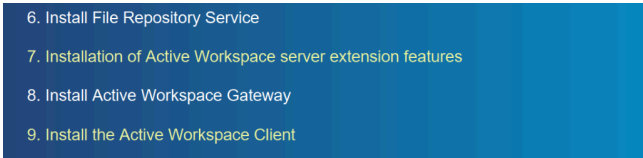

- Connects to the dev server service using configured port(3001)
- Developer can verify the local declarative modules
- No darsi repository changes can be seen
- On-the-fly deployment of changes in the site.

Installation
