

Decision Labels

Tuesday, October 08, 2024 2:29 PM

Decision labels are the options that are provided to reviewer on the review and acknowledge task.

Eg: Accept, Reject, No Decision

We can change this through BMIDE.

Step 1: Create a LOV with the decisions that you want to show and use the same values that are mentioned in the **Fnd0DefaultRevDecisionSetLOV**. And the type must be **ListOfValuesInteger**

Value	Description	Condition	COTS	Template
0	No Decision	: is True	✓	foundation
78	Reject	: is True	✓	foundation
89	Approve	: is True	✓	foundation

Step 2: Add that LOV to **Fnd0ReviewDecisionSetsLOV**.

Step 3: Add the decisions to the **Fnd0SignoffDecisions**.

Value	Description	Condition	COTS	Template
Approve		: is True	✓	foundation
Reject		: is True	✓	foundation
No Decision		: is True	✓	foundation
Acknowledge		: is True	✓	foundation
Not Acknowledge		: is True	✓	foundation
Complete		: is True	✓	foundation
Incomplete		: is True	✓	foundation
Rework		: is True	✓	foundation

Step 4: Deploy the changes and create a new workflow and add review task. In the **Display the task attribute panel**, under decision label drop down, add the newly created

Decision Label: **Default Review Decision Set LOV: Approve, Reject, No Decision**

Other options: Fnd0CompleteReworkRevDecisionSetLOV: Complete, Rework, No Decision; A2Fnd0NewDecisionLabes: Accept, Deny, NoDecision
