

Property Renderers

Tuesday, August 06, 2024 9:46 AM

Property Renderers are used to set or overlay an icon to our custom business objects.

Steps to use Property Renderers:

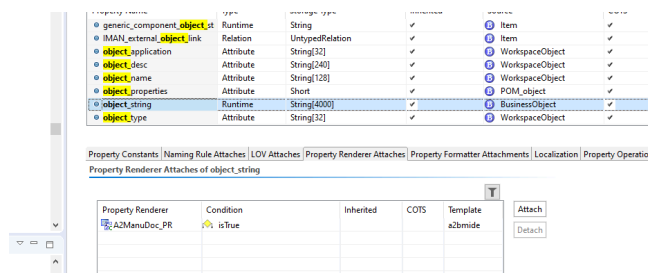

1. Download the icons from the website <https://icons8.com> in 16/16 format.
2. Attach those downloaded icons to the Icons folder in your project in the navigator page.

3. Now create a new property renderer and fill the required details.
4. Use the following code as example to fill the Render Definition field.

```
<icons Version="1.0">
  <propertyMap name="property_nameMap">
    <item key="Commercial" value="A2icons8-commercial-16.png"/>
    <item key="Clinical" value="A2icons8-clinical-16.png"/>
  </propertyMap>
  <primaryIcon source="A2icons8-tick-16.png"/>
  <overlayIcon source="a2doc_type" mapName="property_nameMap" />
</icons>
```

5. In **overlayIcon source** give the property name that you have created in your custom business object.
6. **Commercial** and **Clinical** are the LOV values attached to **a2doc_type**, so I have added different icons to those values.
7. Now attach this Property renderer to business object for object_string property.

8. Save and deploy the changes.
