

Basic Ques

31 July 2024 16:02

1. To check the UID of the business object,
select the particular business object --> Window --> show view --> other --> search for Print and select Print Object.
2. Explicit check out --> Clicking on the button.
3. Implicit check out --> Double click on BO.
4. To check the versions of a Dataset,
select the dataset --> file --> view with.
Versions of a dataset will be updated only when we check out and do some changes in the named reference.

1.What is the architecture behind File Management System.?

Ans: FMS consists of 2 types

- FMS Server Side Cache(FSC): It will be on the server side and used to fetch data from the database and send it to FCC.
- FMS Client Side Cache(FCC): It will be on the client side and it will take requests from the client and send it to FSC and the fetched data will be delivered back to user/cl

2.In which folders do we get the details of all the features which we install and explain in detail about the folder?

Ans: In TC_ROOT we have all the files related to installation.

- Install- In this folder we have all configuration files. Which holds all the features of TC.
Configuration.XML - This file in install folder contains all the features of the TC. It also contains the details about the installation.

3.What is the importance of data folder in TC_ROOT?

Ans: It contains all files related to templates and files that are used to link with TC_DATA folder.

4.Scenario: If I have changed my license server in which files generally, I need to refer?

Ans: We have to change the license in 3 places

- tc_profilevars - It is used to set environment variables while launching TC.
- Configuration.XML - It contains all the features that we installed.
- "Set Environment Variables" in software center.

After changing in these 3 places we have to restart our machine to apply the changes.

5.Scenario: If you are logging in Teamcenter with some hostname which is no longer used where do I get the details of the settings and how do I need to proceed?

Ans: We have to change the Host name in configuration.XML and tc_profilevars.XML

6.What all are the components start (in the background) when you launch Teamcenter icon?

Ans:

- Java
- FSC
- Oracle DB

7.How to check FSC and FCC running status?

Ans:

- To check the status of FSC, we can go to software center and in "Manage Your Installations" we can check the status.
- For FCC we need to run the following command in TC command prompt
"D:\TC_13\TC_ROOT\tccs\bin\fccstat.exe -status".

8.What is TCCS and the importance of TC_Profilevars file in Teamcenter?

Ans:

- Teamcenter Communication System(TCCS) manages communication and file transfers between Teamcenter clients and servers. which uploads and downloads request the volume to the User's workstation vice versa.
- tc_profilevars consist of all environment variables to run team center.

9.What are the files and folders that are called when we run TC command prompt?

Ans:

- Folders: TC_ROOT, TC_DATA,
- Files: tc_profilevars.bat, fccstat.exe

10.In which file we can find all the errors defined?

- D:\TC_13\TC_ROOT\lang\textserver\en_US\ue_errors.xml

11.What is TEM and how to run the tem.bat file without software center?

- Teamcenter Environment Manager(TEM) is to add or remove the Teamcenter software features
- To run tem.bat we need to go Admin command prompt (path: D:\TC_13\TC_ROOT\install\tem.bat)

12.Where do I find all the details of FSC configurations?

- Details of FSC configurations can be found in the following file path:"D:\TeamCenter\TC_ROOT\fsc\fmsmaster.xml.template"
-

13.An employee working in the Planning department wants to move all the pdf files from his local machine to a managed environment .

- He can attach a pdf dataset and he can add named reference to that.

18. employees working with the IT Maintenance and Support department have been assigned the task to monitor the parts successfully transferred from Teamcenter to SAP employee works in 1st shift and the other in the 2nd shift. Each one of them has to review the SAP logs and update a text file with number of Teamcenter objects transferrec during his shift. Both record their observations in separate files and later share it with the department head.

18.1	The department head wants both of them to use the same file instead of 2 different files and manage that file in Teamcenter, with the additional facility that if one modifying the file other should not be allowed to change edit the file.
------	---

Ans:	The person who is working on the file can check-out and do the changes. Unless he check-ins again, remaining users cannot edit it.
------	--

17.What is volume, To whom we should assign volume User/Role/Group? Why?

- Volume is a folder in which all datasets attached to business objects will be stored and we will attach a volume to User and Group.

16.If user forgot his password, is there any way to retrieve the password? Who can reset the password?

- If the user forgot the password we cannot retrieve the password but we can create new password.
- Only the user with admin privilege can reset the password.

14.What is difference between deletion and deactivation of the TC user?

- In deletion user will be completely deleted from the TC database
Deactivation means we will change of the status to Inactive in Organization.

13.To get administrative privileges a user should be added under which group & role?

- To get administrative privileges a user should be added in dba and DBA role.

12.Define Site, Site Id and Site Name and For a single Database, how many sites can exist?

- **Site:** A site describes an individual installation of Teamcenter and comprises a single database, all users accessing that database.
- **Site Id & Site Name:** Every site must have its own unique name and ID. The site ID is generated automatically when the database is installed.
- For a single database we can have only one site.

11.What is Group why are we using Groups and Explain with a real time example?

- Group is a collection of people, gathered together to complete a task/tasks.
Exp- Training group includes Virat, Prudhvi, Ganesh. Whose task is to provide training for new joiners.

10.What is the difference between Person and User?

- **Person-** Person is a member in Organization who does not have any license to work in TC. TC can have any no.of persons.
- **User-** User has licence and can be able to work in TC and in TC we have limited no.of users.

9.What are the types of licenses available in Teamcenter, Explain the benefits/use?

- **Author-** Contains both write and Read access in TC.
- **Consumer-** Has only write access and he cannot be able to create new objects.
- **Admin-** He can perform all type of actions expect initiating workflows.

8.What is organization and Why should we maintain organization in Teamcenter?

- Organization is group of people working for particular goal and it is basically distribution of work.
- It helps to create and maintain your company's organization with Tc organization.

7.What are the Preferences and why they are used?

- Preferences are used to change the default values that are defined in TC.

6.Define Check IN/Checkout, What is implicit and explicit Check in/Checkout?

- **Check-Out-** If user wants to edit the properties of a particular business object he has to check_out and do the changes in his repository.
- **Check-in-** After doing the changes, if he wants to update the database he can check_in and after checking_in these changes will be visible to other users.
- **Implicit check-in/check-out-** if we double click on the business object, it will be automatically checked_out/checked_in.
- **Explicit check-in/check-out-** we can do this by selecting the buttons in the summary tab.

5.What is Summary View, Viewer View, Impact Analysis View, Details view?

- **Summary View-** This view contains a basic properties of the selected object and we can see Audit logs and related datasets.
- **Viewer view-** We can see all the properties of the selected objects and we can update the values and we can view physical files that are linked to that objects.
- **Impact Analysis-** It contains 2 operations, Where Used and Where Referenced.
Where Used- This will give you list of objects that are linked with selected object in an assembly.
Where Referenced- This will give you list of objects, in which the selected object is used as reference in Save AS/ Revise/ Copy etc..
- **Details view-** This contains the details of secondary objects that are linked with the selected object and their relation.

4.What are the Versions and Sequences?

- **Versions-** Every time when we check-out and do the changes in a dataset, a version is created.
- **Sequences-** Every time when we check-out and check-in on a particular object, a new sequence is created.

3.What is Save As and Revise operation?

- **Save as:** It will create duplicate of a select item as save with different name.
- **Revise:** It will create a new revision of a selected item.

2.What is a Perspective and What is component View?

- **Perspective** :A perspective defines as collection of views of an Teamcenter window .A window which you see when you open Teamcenter its called as perspective and module has its own perspective, and it contains different views
- **Component view** : When we double click on business object, it will open in separate window called as component window.

1.Define Item, Item Master, Revision, Revision Master, Folder, Document, Form, Dataset?

- **ITEM:-** Item it is Business object to store the product information.
- **Item Master:-**It consist the Item details in the form of parameters ID ,User data...
- **Revision:-** Revisions are data objects used to manage changes(revisions) to items
- **Revision Master:-**It consist the Item Revision details in the form of parameters ID ,User data...
- **Folder:-** Folder consist of files .It helps to navigate easily.
- **Document:-** It is a business object provided by Teamcenter to store the document type of file.
- **Dataset:-**A physical file which contains some data and it may be a document, excel ,word ,pdf file or text file, etc...
