

Process Assignment List / Template filter

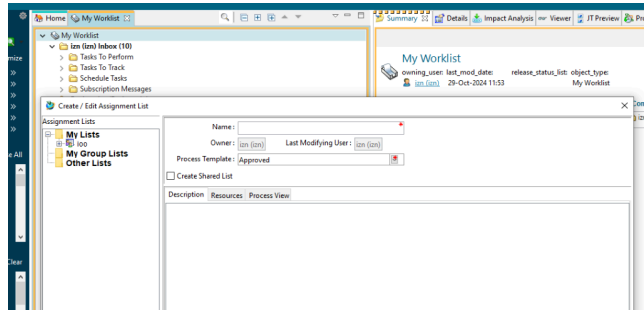

Wednesday, October 30, 2024 2:17 PM

PAL

PAL is used to assign different tasks in process to different users.

It can be done by opening worklist --> Tools --> Process Assignment List --> Create/Edit.

Select the process and assign to users.

Template Filter

In Teamcenter Workflow, we have a filter called Template Filter, where we can restrict a process to visible for someone based on Object type based and Group based.

Whereas through BMIDE, We can create a condition and attach that to Filter condition for a workflow process.
